Foreword

The current issue of “New Arrivals: List of New Additions with Summaries” contains a list of New Books which were processed in the month of January, 2022 and available for use in the National Social Science Documentation Centre of ICSSR. In the main text, entries are arranged by the Title, followed by bibliographical details and a summary of the document. For easy retrieval Author and Keyword Index are also given at the end wherein the number in front of Author or Keyword denotes the serial number of the entry in the main list of New Additions. Interested readers can consult the listed titles by visiting the library.

Suggestions are always welcome.

1	(IL)Logical Knowledge Management: A Guide to Knowledge Management in the 21st Century/ Schertzer, Beverly Weed-- Emerald Publishing Limited: United Kingdom, 2020; xxi, 124p. This book presents that in today's world, strategic knowledge management is a critical practice for all businesses seeking to protect their assets and produce intelligible and useable information. However, formally implementing a comprehensive knowledge management infrastructure to support an organization—enabling businesses to create, protect, and collaborate through knowledge—is often easier said than done. How do businesses adapt to the evolving challenges of knowledge management, and what best-practice tips are based on common misconceptions?	51451
2	Capabilities, Innovation And Economic Growth: Policymaking for Freedom And Efficiency: Policymaking for Freedom And Efficiency/ Capriati, Michele-- Routledge Taylor & Francis Group: New York, 2018; xi,250p. This book explores the question of whether we can foster growth and innovation while promoting individual freedoms poses a challenge for everyone studying and working on innovation and development policies. Whilst innovation literature is largely dominated by a focus on efficiency, development literature tends to focus on equality and pays less attention to mechanisms fostering economic and social change. This book aims to move beyond these barriers and to identify development policies that foster both efficiency and equality, exploring the connection between innovation policies and the improvement of individual freedoms. Capabilities, Innovation and Economic Growth argue that we can answer these questions by focusing on the relation between Amartya Sen's human development approach and the Neo-Schumpeterian analysis of innovation systems. After considering the connections between the two schools of thought and the way they enrich each other's perspectives, chapters go on to show how policy can support virtuous circles in which innovation, human development and economic growth interact and mutually reinforce each other. This is undertaken through the descriptive analysis and the empirical testing of a sample of nations and European regions. The volume concludes with an exploration of the contribution that the capabilities approach can give to the design of innovation policy, and with the analysis of macroeconomic policies favourable to innovation and human development. This will be essential reading for: students and academic economists interested in development, growth and innovation; policymakers and officers in charge of defining development and innovation plans at the national and regional level; and consultants and managers in development agencies implementing innovation and development projects.	51421

- 3 Chinese And Their Rebellions: View in connection with their National Philosophy, Ethics, Legislation, and Administration/ Meadows, Thomas Taylor-- Cambridge University Press: United Kingdom, 2015; lx,656p. 51465

This Content was inspired by the lectures in Munich of the German orientalist Karl Friedrich Neumann, Thomas Taylor Meadows (1815–68) devoted himself to the study of Chinese in 1841, intending to enter British service. He arrived in China early in 1843 and rose quickly to the post of a consular interpreter at the key treaty port of Canton (Guangzhou), where he remained for several years. His Desultory Notes on the Government and People of China, and on the Chinese Language (1847) is also reissued in this series. The present work, first published in 1856, is an expansive treatment of matters relating to 'the present Chinese rebellion', namely the Taiping Rebellion (1850–64). Meadows discusses the ongoing conflict within its historical and cultural context, offering also observations and recommendations on Anglo-Chinese relations. He closes with a lengthy disquisition on the nature and state of 'civilization' in the East and West.

- 4 Commanding Military Power: Organizing for Victory and Defeat on the Battlefield/ Grauer, Ryan-- Cambridge University Press: United Kingdom, 2016; 280, pp. 51462

It describes Commanding Military Power offers a new explanation of why some armed forces are stronger than others. Ryan Grauer advances a 'command structure theory' which combines insights from organization theory, international relations, and security studies kinds of literature to provide a unique perspective on military power. Specifically, armed forces organized to facilitate swift and accurate perception of and response to battlefield developments will cope better with war's inherent uncertainty, use resources effectively, and, quite often, win. Case studies of battles from the Russo-Japanese War, Chinese Civil War and Korean War, based on new archival research, underscore the argument, showing that even smaller and materially weaker militaries can fight effectively against and defeat larger and better-endowed adversaries when they are organizationally prepared to manage uncertainty. That organization often matters more than numbers and specific tools of war has crucial implications for both contemporary and future thinking about and efforts to improve martial strength.

- 5 Creating Smart Cities/ Coletta, Claudio(ed.); Kitchin, Rob(ed.) and Evans, Leighton(ed.)-- Routledge Taylor & Francis Group: New York, 2019; xi,241p. 51422

The book is about to tell about the cities around the world, digital technologies are utilized to manage city services and infrastructures, to govern urban life, to solve urban issues and to drive local and regional economies. While "smart city" advocates are keen to promote the benefits of smart urbanism – increased efficiency, sustainability, resilience, competitiveness, safety and security – critics point to the negative effects, such as the production of technocratic governance, the corporatization of urban services, technological lock-ins, privacy harms and vulnerability to cyberattack. This book, through a range of international case studies, suggests social, political and practical interventions that would enable

more equitable and just smart cities, reaping the benefits of smart city initiatives while minimizing some of their perils. Included are case studies from Ireland, the United States of America, Colombia, the Netherlands, Singapore, India and the United Kingdom. These chapters discuss a range of issues including political economy, citizenship, standards, test-bedding, urban regeneration, ethics, surveillance, privacy and cybersecurity. This book will be of interest to urban policymakers, as well as researchers in Regional Studies and Urban Planning.

- 6 Crisis in the European Monetary Union: A Core - Periphery Perspective: A Core - Periphery Perspective/ Celi, Giuseppe; Guarascio, Dario and Ginzburg, Andrea-- Routledge Taylor & Francis Group: New York, 2018; xii,297p. 51423

This book explores about after decades of economic integration and EU enlargement, the economic geography of Europe has shifted, with new peripheries emerging and the core showing signs of fragmentation. This book examines the paths of the core and peripheral countries, with a focus on their diverse productive capabilities and their interdependence. Crisis in the European Monetary Union: A Core-Periphery Perspective provides a new framework for analysing the economic crisis that has shaken the Eurozone countries. Its analysis goes beyond the short-term, to study the medium and long-term relations between 'core' countries (particularly Germany) and Southern European 'peripheral' countries. The authors argue that long-term sustainability means assigning the state a key role in guiding investment, which in turn implies industrial policies geared towards diversifying, innovating and strengthening the economic structures of peripheral countries to help them thrive. Offering a fresh angle on the European crisis, this volume will appeal to students, academics and policymakers interested in the past, present and future construction of Europe.

- 7 Critical Capabilities and Competencies for Knowledge Organisation/ Garcia-Perez, Alexis (et. al)-- Emerald Publishing Limited: United Kingdom, 2020; xxv, 243p. 51455

This content covers failed knowledge management projects that have one element in common: they fail to focus on the organization's core business functions and instead choose functions that are easy or might produce 'low-hanging fruit'. As a result, often even successful knowledge management projects add little value to the organization as they fail to address the pain points of the heart of the business. So how can knowledge management professionals position themselves for the greatest success? In this practical guide, expert authors Alexis Garcia-Perez, Juan Gabriel Cegarra-Navarro, Denise Bedford, Margo Thomas, and Susan Wakabayashi demonstrate how professionals can map knowledge resources to support business-critical capabilities, and increase the impact of knowledge management projects. They also explain how to avoid investing in resources with low value, and how to develop strategies and action plans for different types of resources. Providing practical guidance for professionals, and

including mini-case studies of successes and failures, this is an essential book for any knowledge management professional, researcher or student

- 8 Culture Of Military Organizations/ Mansoor, Peter R | Murray, Williamson. (Con)- 51466
- Cambridge University Press: United Kingdom, 2019; x,473p.

The book is about to tell us about culture has an enormous influence on military organizations and their success or failure in war. Cultural biases often result in unstated assumptions that have a deep impact on the making of strategy, operational planning, doctrinal creation, and the organization and training of armed forces. Except in unique circumstances, culture grows slowly, embedding so deeply that members often act unconsciously according to its dictates. Of all the factors that are involved in military effectiveness, culture is perhaps the most important. Yet, it also remains the most difficult to describe and understand, because it entails so many external factors that impinge, warp, and distort its formation and continuities. The sixteen case studies in this volume examine the culture of armies, navies, and air forces from the Civil War to the Iraq War and how and why culture affected their performance in the ultimate arbitration of war.

- 9 Digital Finance: Big Data, Start-ups, and the Future of Finance: Big Data, Start- 51424
ups, and the Future of Finance/ Beaumont, Perry H.-- Routledge Taylor & Francis Group: New York, 2020; xxiv,191p.

This book analyses the internet is dramatically transforming the way business is done, particularly for financial services. Digital Finance takes a thoughtful look at how the industry is evolving, and it explains how to integrate concepts of digital finance into existing traditional finance platforms. This book explores what successful companies are doing to maximize their opportunities in this context and offers suggestions on how to introduce digital finance into a firm's structure. Specific strategies for a digital future are presented, alongside numerous case studies that explore key attributes of success. In recognition of the rapidly evolving nature of finance today, Digital Finance is accompanied by a website maintained by the author (PerryBeaumont.com), as well as links to other content with insightful articles, analyses, and opinions. For both practitioners and students of finance, Digital Finance provides a rich context for a better understanding of the landscape of finance today and lays the foundation for us to process and create the financial innovations of tomorrow.

- 10 Economics of Transition: developing and reforming emerging economies: 51431
developing and reforming emerging economies/ Iwasaki, Ichiro(ed.)-- Routledge Taylor & Francis Group: New York, 2020; xvii,379p.

It presents the last three decades since the fall of the Berlin Wall, there has been a vast amount of study looking at transforming the planned economy to a market economy from both theoretical and empirical aspects. This book provides an overview and insight into transition economies in the recent decades and looks at key economics topics from the so-called "transition strategy debate" to

environmental reform. The book also includes an analytical review and meta-analysis of the existing literature. By integrating theoretical discussions and systematically synthesizing empirical findings, this book may help to enlighten the debate on the timing, speed, and policy sequence of economic transition. The book will particularly appeal to researchers, policymakers, other practitioners, and under- and post-graduate students who are interested in transition economies in Eastern Europe, the former Soviet Union, Southeast Asia, and China. It aims to be read as an advanced reader.

- 11 Emergence of Cross-Innovation Systems: Audiovisual Industries Co-innovating with Education, Health Care and Tourism/ Ibrus, Indrek (ed.)-- Emerald Publishing Limited: United Kingdom, 2019; xiv, 230 51458

This book combines economic studies of innovation systems with studies of mediatisation, media convergence, trans- and cross-media and with other approaches within media and cultural studies. It elaborates on a new concept, cross-innovation, referring to co-innovation and convergence processes taking place between different sectors of digital service economies. The proposition is that digitisation and mediatisation processes are conditioning new inter-sector dialogues and the emergence of new cross-innovation systems at the borderlines of formerly distinct industries. The case study industries presented are, on the one hand, audiovisual media (film, television, videogames, etc.) and health care, education or tourism, on the other hand. The book builds on 2 years of empirical work across Nordic and Baltic countries, putting a special emphasis on the opportunities and challenges for small countries as they build the cross-innovation systems in the era of media globalisation and platform station of services. The empirical research of 144 interviews with stakeholders (policymakers, entrepreneurs, managers, professionals) from all four sectors and of secondary data and documentary analysis. The findings tell of complex stories how global platform station of tourism undermines the emergence of related cross-innovation systems in small countries; how the fragmentation of local education and health care markets does not enable the scalability of innovations but protects local innovation systems from being overtaken by global platform giants. The book has stories of successful facilitation of cross-innovation as well as failures to do so

- 12 The emergence of the Fourth Industrial Revolution: An Historical Introduction to Knowledge Management and the Innovation Economy/ Johannessen, Jon-Arild-- Emerald Publishing Limited: United Kingdom, 2019; x,133p. 51457

This book tells about the industrial revolution transformed society as we know it today. But in the last thirty years, there has been another industrial revolution, a technology revolution that has changed the world and given rise to an innovation economy that is changing the face of organizational logic. From leading knowledge management expert, Jon-Arild Johannessen, The Emergence of the Fourth Revolution: An Historical Introduction to Knowledge Management and the Innovation Economy explores how informants and info structures are taking over from old technology infrastructures, and a new organizational logic is breaking out

of these innovations. Johannessen suggests a new structure of cooperation, where global competence clusters and global innovation processes bring to light this changing economy. And, through these changes, Johannessen shows how the knowledge worker emerges to become the new working class of the fourth industrial revolution. For students in knowledge management and organizational studies, this is an unmissable text that explores the future of our economy, bringing to light the exciting new possibilities that these innovative revolutions have caused.

- 13 Emotional Intelligence and Critical Thinking for Library Leaders/ Shaffer, Gary L.- 51459
- Emerald Publishing Limited: the United Kingdom, 2020; xii, 144p.

This book explores increasingly, more is being asked from library leaders and those who aspire to join their ranks. As the use of libraries changes, leaders need to improve their emotional intelligence and critical thinking to attract and retain users. Focused on practical management advice, this is an engaging discussion of how library leaders can grow in their roles. Detailing 25 emotional intelligence traits library leaders and others rely on most, expert author Gary L. Shaffer explores how critical thinking skills and emotional intelligence overlap, and how we can utilise them to improve. Looking across decision-making, problem-solving, critical writing, and creative thinking, Shaffer includes four case studies, each relating to both emotional intelligence and critical thinking skills. With real-world evidence and practical advice, the case studies show us how four library leaders used these traits and skills to tackle major real-world problems and issues. Finally, Shaffer suggests three leadership styles we can adopt to improve our emotional intelligence. The first book in a new series of library leadership and management books, Emotional Intelligence and Critical Thinking for Library Leaders is a book of practical solutions based on academically sound research. For library and information science professionals and researchers, this is an unmissable book for those looking to the future of libraries.

- 14 Employment Policy in Emerging Economies: The Indian Case: The Indian Case/ 51425
Hill, Elizabeth (ed.) and Palit, Amitendu (ed.)-- Routledge Taylor & Francis Group:
New York, 2018; xi, 173p.

This book describes employment as a critical part of the macro-economy and a key driver of economic development. India's employment policy over the past three decades provides an important case study for understanding how government attitudes to the labour market contribute to an emerging economy's growth and development. This study contains important insights on the policy challenges faced by one of the world's most populous, labour abundant economies in securing employment in a context of structural change. The book considers India's approach to employment policy from a national and global perspective and whether policy settings promote employment-intensive growth. Chapters in the first half of the volume evaluate India's approach to employment policy within the national and international context. This includes the ILO Decent Work program, the national agenda for inclusive growth, and national regulatory

frameworks for labour and education. Chapters in the second half of the volume focus on how employment policy works in practice and its impact on manufacturing workers, the self-employed, women, and rural workers. These chapters draw attention to the contradictions within the current policy regime and the need for new approaches. *Employment Policy in Emerging Economies* will interest scholars, policymakers and students of the Indian economy and South Asia more generally. It will support undergraduate and postgraduate academic teaching in courses on economic development, global political economy, the Indian economy and global labour.

- 15 *Gender And Economics In Muslim Communities: Critical Feminist And Postcolonial Analyses: Critical Feminist And Postcolonial Analyses/ Kongar, Ebru(ed.); Olmsted, Jennifer C(ed.) and Shahabuddin, Elora(ed.)-- Routledge Taylor & Francis Group: New York, 2017; xxi,317p.* 51426

This content covers bringing together feminist analyses of economic processes and outcomes with feminist critiques of Orientalism, this book examines the diverse economic realities facing women in a range of Muslim communities. This approach pays special attention to the role of Islam in economic analyses of gender equality and women's well-being in Muslim communities, while at the same time challenging biased and inaccurate accounts that essentialize Islam. Nuanced case studies conducted in Bangladesh, Iran, Israel, Nigeria, and Turkey illustrate the historical and institutional diversity of Muslim communities and draw vivid pictures of the everyday economic lives of Muslim women in these communities. These studies are complemented by quantitative analyses that extend beyond inserting Islam as a dummy variable. The contributions represent a wide range of disciplines, including anthropology, economics, gender studies, political science, psychology, and sociology. By placing critiques of Orientalist scholarship in direct dialogue with scholarship on economic development in Muslim contexts, this diverse collection illustrates how different methods and frameworks can work together to provide a better understanding of gender equality and women's well-being in Muslim contexts. In doing so, the authors aim to facilitate conversations among feminist scholars across disciplines to provide a more nuanced picture of the situation facing women in Muslim communities. This book was originally published as a special issue of *Feminist Economics*

- 16 *Geopolitics of the Knowledge-Based Economy/ Moisio, Sami-- Routledge Taylor & Francis Group: New York, 2018; ix,182p.* 51427

This book combines we live in the era of the knowledge-based economy, and this has major implications for how states, cities and even supranational political units are spatially planned, governed and developed. In this book, Sami Moisio delves deeply into the links between the knowledge-based economy and geopolitics, examining a wide range of themes, including city geopolitics and the university as a geopolitical site. Overall, this work shows that knowledge-based "economization" can be understood as a geopolitical process that produces territories of wealth, security, power and belonging. This book will prove

enlightening to students, researchers and policymakers in the fields of human geography, urban studies, spatial planning, political science and international relations.

- 17 Global Food Security: What Matters?: What Matters?/ Zhou, Zhang-Yue-- Routledge Taylor & Francis Group: New York, 2020; xxii,270p. 51428

This book looks at food security from a socio-economic perspective. It offers a detailed and systematic examination of food security from its historical backgrounds, concepts and measurements, to the determinants and approaches to achieve food security. The book also introduces the key challenges and root causes of food insecurity. Through country-specific cases, the book highlights instances of both successful and disastrous national food security management and their outcomes. The invaluable learning experiences of these countries shed light on food security practices, and the straightforward demand-supply framework effectively guides readers in understanding food security issues. This is an essential resource for anyone keen to learn more about food security, particularly researchers and university students who are new to the field. The book endeavours to help us reflect on the current phenomenon and strategize better for the future.

- 18 Globalisation of Indian Business: Cross Border Mergers and Acquisitions in Indian Manufacturing: Cross Border Mergers and Acquisitions in Indian Manufacturing/ Saraswathy, Beena-- Routledge Taylor & Francis Group: New York, 2018; xii,165p. 51432

It presents that consolidation activities such as mergers and acquisitions (M&As) have been one of the major strategies adopted by Indian firms to withstand global competition. M&As experienced a substantial increase in value and volume during the post-liberalization era, facilitated by the presence of foreign subsidiaries in the Indian market as well as competitive pressure on domestic firms. The increased foreign investment through M&As brought new dimensions to the fore such as the implications on technological performance, efficiency, and more importantly, competition in the Indian market. The Globalisation of Indian Business: Cross Border Mergers and Acquisitions in Indian Manufacturing provides an in-depth analysis of these issues, specifically aiming to understand whether the M&As strategies helped the firms to achieve their desired objectives in terms of improvement in technology, efficiency and market power in the context of the increase of M&As in India, using appropriate statistical and econometric techniques. The book is of additional importance in the context of the recently implemented Competition Act, replacing the thirty-year-old MRTP Act in India. The new Act aims to maintain competition and protect consumers' interests without harming the producers. Based on the analysis, broadly, the study cautions the regulators to rethink the efficiency defence argument and become more vigilant on the creation of monopolies. On the other side, it suggests firms should

reconsider their post-merger integration strategy since consolidation has not led to a sustainable increase in the market share of the surviving firms.

- 19 Good Life Beyond Growth: New Perspectives / Rosa, Hartmut(ed.) and Henning, Christoph(ed.)-- Routledge Taylor & Francis Group: New York, 2018; xvii,270p. 51433

The book covers many countries that have experienced a decline in economic growth for decades, an effect that was only aggravated by the recent global financial crisis. What if in the 21st century this is no longer an exception, but the general rule? Does an economy without growth necessarily bring hardship and crises, as is often assumed? Or could it be a chance for a better life? Authors have long argued that money added to an income that already secures basic needs no longer enhances well-being. Also, ecological constraints and a sinking global absorption capacity increasingly reduce the margin of profitability on investments. Efforts to restore growth politically, however, often lead to reduced levels of social protection, reduced ecological and health standards, unfair tax burdens and rising inequalities. Thus it is time to dissolve the link between economic growth and the good life. This book argues that a good life beyond growth is not only possible but highly desirable. It conceptualizes "the good life" as a fulfilled life that is embedded in social relations and at peace with nature, independent of a mounting availability of resources. In bringing together experts from different fields, this book opens an interdisciplinary discussion that has often been restricted to separate disciplines. Philosophers, sociologists, economists and activists come together to discuss the political and social conditions of a good life in societies that no longer rely on economic growth and no longer call for an ever-expanding circle of extraction, consumption, pollution, waste, conflict, and psychological burnout. Read together, these essays will have a major impact on the debates about economic growth, economic and ecological justice, and the good life in times of crisis.

- 20 Grand Strategy and Military Alliances/ Mansoor, Peter R and Murray, Williamson. (Con)-- Cambridge University Press: United Kingdom, 2018; 411, pp 51463

Book tells about alliances that have shaped grand strategy and warfare since the dawn of civilization. Indeed, it is doubtful that the United States of America would have gained its independence without its Revolutionary War alliance with France. Such alliances may prove even more important to international security in the twenty-first century. Economic and financial difficulties alone will ensure that policymakers attempt to spread the burden of securing vital interests onto other nations through alliances, both formal organizations such as NATO and informal alliances of convenience as developed to wage the Gulf War in 1991. A team of leading historians examine the problems inherent in alliance politics and relationships in the framework of grand strategy through the lens of history. Aimed at not just the military aspects of alliances, the book uncovers the myriad factors that have made such coalitions succeed or fail in the past.

- 21 Indian Agriculture After The Green Revolution: Changes And Challenges: Changes And Challenges/ Goswami, Binoy(ed.); Bezbaruah, Madhuriya Prasad(ed.) and Mandal, Raju(ed.)-- Routledge Taylor & Francis Group: New York, 2018; xv,233p. 51429

It describes a country plagued with chronic food shortage, the Green Revolution turned India into a food-grain self-sufficient nation within the decade of 1968-1978. By contrast, the decade of 1995-2005 witnessed a spate of suicides among farmers in many parts of the country. These tragic incidents were symptomatic of the severe stress and strain that the agriculture sector had meanwhile accumulated. The book recounts how the high achievements of the Green Revolution had overgrown to a state of this 'agrarian crisis'. In the process, it also brings to fore the underlying resilience and innovativeness in the sector which enabled it not just to survive through the crisis but to evolve and revive out of it. The need of the hour is to create an environment that will enable the sector to acquire the robustness to contend with the challenges of lifting levels of farm income and coping with Climate Change. To this end, a multi-pronged intervention strategy has been suggested. Reviving public investment in irrigation, tuning agrarian institutions to the changed context, strengthening of a market institution for better farm-market linkage and financial access of farmers, and preparing the ground for ushering in technological innovations should form the major components of this policy paradigm.

- 22 Knowledge Economies and Knowledge Work/ Lafayette, Bill (et. all)-- Emerald Publishing Limited: United Kingdom, 2019; xxiii, 276p. 51454

This book combines our global economy is going through a major transformation, from an industrial economy to a knowledge economy, rendering knowledge a primary factor in production. In this practical, real-world focused book, expert authors Bill LaFayette, Wayne Curtis, Denise Bedford and Seema Iyer come together to define and discuss knowledge work. A common misconception claims that knowledge work is limited to high-skill and technology occupations. The truth is that this growing field applies across all aspects of the economy, which has critical implications on not only macro- but also micro-levels. As the nature of work is changing, the functions of managing work must also change, as well as our approaches to education and educational organizations. Through a thorough exploration of the functions and structures required to adapt to this change, as well as a close examination of the geography of knowledge, this first book in the Working Methods for Knowledge Management series helps leaders leverage knowledge to better serve their communities, workplaces, and organizations. This practical book serves as a guide for corporate leaders and managers, knowledge managers, workforce professionals, policymakers, labour economists, human capital researchers, and educators. It helps diverse audiences understand the implications of this transformation and helps them navigate this new economy

- 23 Knowledge Management for Leadership and Communication: AI, Innovation and the Digital Economy/ Johannessen, Jon-Arild-- Emerald Publishing Limited: United Kingdom, 2020; vi, 153p. 51452

The book deals with the establishment of the innovation economy, the Fourth Industrial Revolution is becoming a reality. As this occurs, new forms of leadership arise, generated by the interaction between leadership functions and neurology. From political leadership to organizational structure, these industrial changes will cause ripples throughout our society. It is important to get ahead of these changes, adapting to the new forms of leadership necessary, before these ripples become tidal waves. To do so, expert author Jon-Arild Johannessen turns to the processes that are a key part of the innovation economy, examining how value creation is changing in the new Industrial Revolution.

- 24 Knowledge Management Philosophy: Communication as a Strategic Asset in Knowledge Management/ Johannessen, Jon-Arild-- Emerald Publishing Limited: United Kingdom, 2020; xi, 147p. 51453

It describes Knowledge Management as an important part of all business, and yet the discipline lacks a philosophy based on systemic thinking. Exploring this gap, expert author Jon-Arild Johannessen continues his research on knowledge management with the groundwork for a new philosophy. Across the four chapters in this book, Johannessen tackles the issues that have stopped a cohesive philosophy from being formed. Tackling the large questions first, he asks: what constitutes a philosophy for knowledge management? What quality criteria are relevant in a knowledge management philosophy? Johannessen also looks at how the emergence of the fourth industrial revolution has eroded and atomized the cohesion of social systems and explores how knowledge management works in social systems, as well as whether social laws can be used to explain knowledge management systems. For students and researchers of information and knowledge management, Johannessen offers a new perspective on our current philosophies, bringing systemic thinking to the front of knowledge management philosophy

- 25 Libraries and Reading: Intellectual Disability and the Extent of Library Diversity/ Conner, Matthew and Plocharczyk, Leah-- Emerald Publishing Limited: United Kingdom, 2020; xiv, 165p. 51460

The book describes libraries are supposed to serve all people in the community, but some still struggle to provide support for those with intellectual and developmental disabilities (IDD). In an age of increasing social consciousness and awareness of diversity, individuals with IDD deserve the greatest attention and support to achieve equality, yet how to do so remains a legitimate question as most library services are not yet prepared to offer the help needed. In Libraries and Reading, expert authors Matthew Conner and Leah Plocharczyk re-examine the modern history of libraries and diversity, looking at the recent legislative history of those with IDD, theories of general and special education, and case

studies of innovative grassroots work around the globe. Including real-world examples, they show how we can make big changes through small steps. In a climate of tightened budgets and severe demands on public literacy resources, the moral imperative of helping those with IDD runs up against practical barriers. Conner and Plocharczyck go to the foundations of social justice in Cultural Studies to show how the means of integrating those with disabilities into libraries and communities can be found in our everyday practices.

- 26 Nuclear Weapons and Coercive Diplomacy/ Sechser, Todd S. and Fuhrmann, Matthew-- Cambridge University Press: United Kingdom, 2017; 343, pp. 51464

The book dealing with nuclear weapons useful for coercive diplomacy? Since 1945, most strategic thinking about nuclear weapons has focused on deterrence - using nuclear threats to prevent attacks against the nation's territory and interests. But an often-overlooked question is whether nuclear threats can also coerce adversaries to relinquish possessions or change their behaviour. Can nuclear weapons be used to blackmail other countries? The prevailing wisdom is that nuclear weapons are useful for coercion, but this book shows that this view is badly misguided. Nuclear weapons are useful mainly for deterrence and self-defence, not for coercion. The authors evaluate the role of nuclear weapons in several foreign policy contexts and present a trove of new quantitative and historical evidence that nuclear weapons do not help countries achieve better results in coercive diplomacy. The evidence is clear: the benefits of possessing nuclear weapons are almost exclusively defensive, not offensive

- 27 Political Economy of the Common Agricultural Policy: Coordinated Capitalism or Bureaucratic Monster? / Collantes, Fernando-- Routledge Taylor & Francis Group: New York, 2020; 116, pp. 51434

This book present about what is the balance of the European Union's Common Agricultural Policy more than half a century after its birth? Does it illustrate the virtues of the European model of coordinated capitalism, as opposed to US-style liberal capitalism? Or is it an incoherent set of instruments that exert diverse negative impacts and, like Frankenstein's monster, seems to have escaped the control of its designers? The Political Economy of the Common Agricultural Policy does not criticize the CAP from the liberal standpoint that views most public interventions in the economy as bad for efficiency and welfare. The CAP has been costly to Europeans, both as consumers and as taxpayers, and has also generated several negative impacts upon third countries, but these costs and impacts have been more moderate than is suggested. This book proposes that the issue with the CAP is not a generic problem of coordinating capitalism but, instead, a more specific problem of low-quality coordination. The text argues that profound reform of the European Union's institutions and policies is required to counter the rapid rise of a more Eurosceptical state of mind but - in the case of agricultural policy - history casts serious doubts on the capacity of the European network of agriculture-related politicians to lead such a reform. This key work is essential reading for researchers, graduate students, and master's level docents

of the Common Agricultural Policy and - more broadly - European Union policy and reform.

- 28 Reforming Global Economic Governance: An Unsettled Order: An Unsettled Order/ Monticelli, Carlo-- Routledge Taylor & Francis Group: New York, 2019; xvi,243p. 51430

It Provides the architecture of global economic and financial governance that has undergone a deep and pervasive reform in the last ten years, radically transforming international institutions and groups, such as the International Monetary Fund, the G7, and the G20. This book investigates the new, unsettled order which is now prevailing, driven by the change in the balance of power between advanced economies and key emerging market economies. Bringing together multiple strands of analysis, traditionally kept separate, Reforming Global Economic Governance: An Unsettled Order particularly explores the role of Europe within this changing world. The book documents and examines a broad range of events, building on methods from economics and other disciplines, as well as on the insights from the author's involvement. This innovative approach allows the reader to ascertain the defining features of the reform: the increasing fragmentation of governance; the interconnectedness of its different elements; and the strong concern for inclusiveness. Furthermore, it presents analyses highlighting the controversial nature of the new order which underpins the current policy debate on international economic relations, including the resurgence of nationalism and trade conflicts. Through these explorations, this engaging book has direct relevance for the prospects of international economic affairs. Offering a comprehensive view of these issues, this accessible text will appeal to scholars, insiders, and the general reader. Its detailed and thorough analyses will also be of great use to those studying economics, international political economy, and international relations.

- 29 Transforming Information Security: Optimizing Five Concurrent Trends to Reduce Resource Drain/ Moriarty, Kathleen M.-- Emerald Publishing Limited: United Kingdom, 2020; 214, pp 51461

The book offers about the information security industry is undergoing a major change, forced by the rise of end-to-end encryption, encryption that cannot be intercepted, transport protocol stack evolution, "zero-trust networks", and distributed computing. While we understand the logical connections between these trends, there is little analysis of all of these trends in combination. Examination of all five trends uncovers opportunities that not only improve the state of information security and the general posture but also lead to resource reductions necessary for information security to be sustainable. In this exciting new book from security expert Kathleen M. Moriarty, the examination of all five trends uncovers opportunities to change the state of information security. Providing a unique perspective from the centre of the debates on end-to-end encryption, Moriarty explores emerging trends in both information security and

transport protocol evolution, going beyond simply pointing out today's problems to providing solutions for the future of our product space

- 30 Translating Knowledge Management Visions into Strategies/ Ceruti, Monique | Williams, Angel | Bedford, Denise-- Emerald Publishing Limited: United Kingdom, 2020; xxii, 203p.

This book presents where is a critical point of failure for every knowledge management effort: when the strategy is isolated from the organization, and when there is no vision anchoring the strategy. Strategy is not a starting point, but a step in the process of creating a sustainable foundation for knowledge management efforts. Given that most knowledge management professionals do not have a grounding in vision development, this backwards approach puts any knowledge management effort at a disadvantage from the very beginning. In the four sections of this book, expert authors Monique Ceruti, Angel Williams and Denise Bedford guide readers through the building blocks of turning knowledge management visions into strategies. They enable professionals to demonstrate their value to the organization's strategic future, as well as empower readers to take a lead in developing a future vision and to help establish a foundation for a 21st-century knowledge organization. Providing knowledge management professionals with a roadmap for success within their organizations is an unmissable book for any professional or researcher tasked with creating new strategies for knowledge management organizations.
